Settimo Milanese, 26th november 2003

Year V, Nr. 1/03

Dear Customer,

hereby we inform you that starting from 1st December 2003 we can supply our valued Customers with the new version of the PA223S gradually.

The transition stage from the current version to the new one will finish within the end of January 2004.

ITW ElettroGiBi want to offer their Clients and the concerned market a further quality improvement of the product.

Object of the PA223S modification is the mechanical hinge: the new design has two plastic fixings, which are the junctions and the pivots between the base and the cover.

This solution is better than the previous "flexible" version for the following reasons:

- easier product handling during assembling of the terminal box
- perfect geometric lining-up between base and cover when closing
- guaranteed functionality of the mechanical hinge even under hostile applications or stocking (low temperature; low percentage of moisture; aging)

ITW ElettroGiBi inform that:

- no dimensional and functional changes have been made
- the approvals and the physical/electrical features remain the same

We remain at your disposal for any further information you might require,

Best regards.

ITW ElettroGiBi Srl
